PROJECTS

Inventory management System — Streamlit, Python

August 2024

Independent Project Developed an inventory management system to track stock levels, orders, and product details in real time. Implemented features like automated stock updates, low-stock alerts, and report generation. Improved accuracy and reduced manual effort in inventory handling.

House price prediction (Predictive Analytics) — Python

April 2025

Independent Project Built a machine learning model to predict house prices based on location, area, and other features. Performed data preprocessing, feature selection, and model training for accurate predictions. Achieved reliable estimation results to support real estate decision-making.

Habit Tracking Mobile Application System — Flutter, Dart, SQLite

September 2025

Independent Project Designed a mobile application to help users track daily habits and achieve personal goals. Implemented features like reminders, progress tracking, and performance visualization. Enhanced user engagement through intuitive UI and consistent tracking mechanisms.
